Bengaluru, Karnataka, India

OBJECTIVE

To leverage my academic foundation in cloud computing and DevOps, along with hands-on experience across multiple cloud platforms, to contribute to building scalable, secure, and automated infrastructures.

EXPERIENCE

• Digital Nexus AI

Mar 2026– Present

AWS Developer Intern

- set up AWS environments for 2 to 3 projects and managed IAM roles for over 10 users.
- Provided support for deploying applications to testing environments using CI/CD pipelines, which reduced the need for manual deployments by 30 to 40% during several project releases.
- Configured and managed cloud-based Linux servers, including system installation, user permission controls, and environment setups.

EDUCATION

• Marwadi University

2021-2025

Bachelor of Technology in Information Technology

Rajkot, India

- GPA: 8.02/10.00

PROJECTS

• Openclaw Monitoring and Security Audit System

Tools: AWS (EC2,S3,IAM), Openclaw, API

- I set up an AI-driven monitoring system on AWS EC2 that can create and start a live dashboard by just giving a single instruction. This saved a lot of time that would have been spent doing setup manually.
- This system is better than traditional tools like Prometheus and Grafana because it automatically includes AI-based security checks, finds vulnerabilities, and creates organized reports right away. The system keeps track of things like CPU usage, memory, internet speed, and system logs in real time, and sends instant alerts through Telegram.

• Geo-spatial Travel Companion

Tools: ReactJS, Firebase, Gemini API, Google API, AWS

- Developed an AI-powered trip planning application that utilizes the Gemini API to generate personalized travel itineraries based on user inputs.
- Crafted an intuitive user interface to facilitate seamless interaction and data input from users.
- Leveraged the Google Maps API to retrieve and display detailed information (such as photos, names, and locations) of suggested places.

• Multi-Cloud Automated Development and Deployment

Tools: AWS(Codepipeline, EC2, CloudFormation) , GCP

- Designed a CI/CD pipeline using AWS CodePipeline, CodeBuild, and CodeDeploy with automated EC2 deployment.
- Integrated GCP Firestore and APIs for seamless data handling, showcasing real-world multi-cloud architecture.
- Hands-on with cloud architecture, CICD, automation, and scalability.

• Full-Stack Web Infrastructure Deployment with Terraform & CloudFormation

Tools: AWS(CloudFormation), Terraform, HCL

- Set up and managed production-ready AWS resources like VPC, EC2 instances and load balancers using both Terraform and CloudFormation, ensuring the same infrastructure setup works the same way in both tools.
- Created a complete 3-phase CI/CD process using CodePipeline, CodeBuild, and CodeDeploy that lets me deploy a React app built with Vite with just one command, without needing any manual setup.
- IAC Code including using IAM roles with only the necessary permissions, storing build artifacts in S3 with AES-256 encryption, Auto Rolling-back with customized templates.

SKILLS

• **Programming Languages:** C, ShellScript, Python , SQL

• **Devops Tools:** Docker, Cloudformation, Terraform, Git, GitHub

• **Cloud Tech :** AWS, GCP, OCI

• **Database Systems:** MySQL, Firebase

CERTIFICATIONS

• **AWS Certified Cloud Practitioner (AWS)**

2025

• **Oracle Certified Foundation Associate (Oracle)**

2025

• **NDG Linux essential (Cisco Academy)**

2022

• **Database Programming with SQL(Oracle)**

2022
